

SEWER CLEAN-OUT ACCESS

There is a backwater valve installed in your sanitary sewer system located in an access box with an exposed grey plastic lid in your basement floor. Removing the lid of the access box gives you access to the clean out and allows you to make a visual inspection of the valve through the clear plastic housing.

When you develop the basement keep the location of this access box cover in mind. If you should ever have a sewer backup, Aquatera Utilities and/or a plumber will want access to this device.
